**Summary**
### Main Points

- High rates of overweight and obesity
- High rates of smoking and drinking
- Teenage pregnancy
- Nearly half the disabled population is women
- Poor sanitation, hygiene and unsafe water contribute to infant death
- High rate of cancer in women

### Notes

- for women, over 20: 53% are obese and 82% are overweight (why?)
- (2003) highest rate of female tobacco smoking in the world
- high tolerance (acceptance) of alcohol consumption
- male alcohol use associated with intimate partner violence
- (2004) 45% disabled people were women
- Adolescent birth rate 39/1,000 women in 2004/05 – 51/1,000 women in 2009 (more young girls are giving birth)
- 66% of women deliver their babies in a healthcare facility
- 68% of women are married or in a de facto relationship
- inadequate and unsafe drinking water, poor personal hygiene, poor food handling and storage and sanitation contribute to the high number of cases of diarrheal, respiratory, eye and skin infections. These are major causes of infant and child mortality
- Over 70% of cancers affect women

### Summary

Women in Kiribati are suffering poor health in many areas. A large proportion of them are overweight or obese and many of them are smoking and drinking too much alcohol. The most alarming statistic is that over 70% of cancers affect women.
1. **Topic:** Gender equity: women and health  
**Source:** http://asiapacific.unwomen.org/en/countries/fiji/co/kiribati  
**Name of Webpage:** Kiribati  
**Name of Website:** UN Women  
**Evaluation of source statement:** this site contained some useful statistics, although they were not really up-to-date (2003/4). The information about gender equity was relevant to my topic and easy to understand. The site was authoritative as it was the United Nations Women site for gender equity and the contact page provided address and phone numbers for the organisation in many countries.  
**Date of Access:** 9/11/2018
